

Dental Implants Are the Most **Attractive, Comfortable,** and **Permanent Solution** to Replacing Tooth Loss!

Thanks to state-of-the-art dental implant treatment, we can help **improve** your smile, your confidence *and* your quality of life!

Do you hide your smile because of missing teeth? Is your bridge uncomfortable? Do your dentures hurt, erode your self-esteem and make you look older? Tired of messy glues and giving up your favorite foods? Isn't waking up to your teeth soaking in a glass—less than romantic?

You Deserve Better!

Today's routine use of dental implants has revolutionized the way missing teeth are replaced.

Nothing even comes close to the advantages of having a dental implant over other tooth-replacement options!

A lot of folks never quite get used to the realities of living with a

bridge, partial or dentures. Yet, **patients tell us their dental implants feel so natural they forget they even have them!**

Many patients report experiencing **little or no pain during treatment** and that getting an implant was easier than having a tooth pulled!

What are Dental Implants?

Dental implants are small posts, similar to your natural roots, securely attached to your jawbone that replace the roots of missing teeth.

Implants create a strong base for attaching your crown replacements, and prevent bone shrinkage that follows tooth loss!

Incredible The ^ Benefits of Dental Implants

**When you're a candidate for implants,
there is no better choice!**

PERMANENT. Can last a lifetime! No more embarrassing slips!

LOOK YOUNGER. "Root replacement" preserves bone and your youthful facial contour.

TOOTH SAVING. No need to grind away bordering teeth.

PREDICTABLE. Documented success rates from 96.6 to 100 percent!

EAT BETTER. Enjoy eating anything you want. Improve your nutrition and your health!

NATURAL. Look, feel and function like natural teeth! No clasps or clicking sounds!

PROVEN RESULTS. Thousands of successful implants! Forty years of proven clinical data!

CONVENIENCE. No more messy glues! No more soaking teeth in a glass!

VALUE. Save time and money by avoiding future bridge replacements.

EASY CARE. No special aids needed. Brush and floss daily as you normally do.

SELF CONFIDENCE. Speak, sneeze, smile and laugh with total confidence!

DURABILITY. Chewing force is the same or better than your natural teeth.

Better
Think Twice
BEFORE
Placing a
Bridge

In the past, a single missing tooth would typically be replaced with a 3-tooth fixed bridge. That means, the healthy teeth on either side of your bridge would have to be ground to a peg to fit crowns over them to anchor the bridge in place!

Fortunately, **dental implants have now become the "standard of care" for tooth replacement—without damaging the other teeth in the process!** And, the cost of replacing one missing tooth with a 3-unit bridge can be comparable to that of a single dental implant!

**You Can't
Put a Price on
"Peace of Mind"!**

Choosing **the only permanent solution for tooth and root replacement is an**

DENTAL BRIDGE PREP

Why would you want to destroy TWO healthy teeth to replace ONE bad tooth?

investment in your oral health, overall well-being, appearance and quality of life.

A recent international survey showed that patients felt their dental implants were "worth every penny" and they "would do it again"!

Gums often noticeably recede around bridgework, leading to an unattractive smile. Also, anchoring teeth can get cavities. **Implants, however, are not affected by decay!**

Call now to find out if you're a candidate for dental implants to replace one, several or all of your missing teeth with **the only permanent solution available!** ❖

facts & figures

- 3 million people have implants, and that number is growing by 500,000 every year.
- Dental implants have been used for over 50 years.
- In some cases, the cost of a single tooth implant is less than the cost of a three-unit bridge. (A three-unit bridge is needed to replace a single missing tooth).
- Unlike bridgework, implants don't require the reduction of healthy adjacent teeth.
- Dental implants are considered more predictable than bridgework, resin bonded bridges and root canal treatment.

Dental Implants Can **PREVENT**

"Facial Collapse"

Dental implants preserve bone and help keep your facial structures intact. **Facial collapse and wrinkles around the mouth caused by bone shrinkage can be virtually eliminated with dental implants!**

If you think missing teeth and roots really don't matter... **THINK AGAIN!**

Failing to replace the entire tooth or choosing the wrong replacement can have devastating consequences on your social, personal and professional life.

Get the Restoration That "Rejuvenates"!

Missing teeth can cause remaining teeth to tilt and drift into the empty spaces. **A bad bite can lead to further tooth loss.** It's like a brick wall that loses its cornerstone... everything eventually caves in. The same "domino effect" also applies to your mouth.

What's worse is that missing roots always lead to bone loss. **Whether a tooth is lost due to injury or extraction, the bone is no longer stimulated and begins to shrink away.** Though a bridge, partial or denture replaces a missing crown, the root is still missing—so the bone continues to dissolve.

Bone shrinkage can create sunken facial contours and wrinkles that make you appear much older than you are. **When all of your teeth are missing and implants are not placed, the lower one-third of your face can literally collapse!**

Once your natural tooth's root is gone, dental implants are your only available option for root replacement!

However, if you delay treatment, you will eventually lose bone support for dentures, partials, bridges **and implants**—leaving you *no options for restoration!* A restored smile will enhance every aspect of your life. ❖

Don't wait! Call now to find out if dental implants are right for YOU!
